

Screenshot taken by selecting the Mathcad window and pressing [Alt-PrtScr] then pasted in MsWord with: Paste → Special → Device Independent Bitmap.

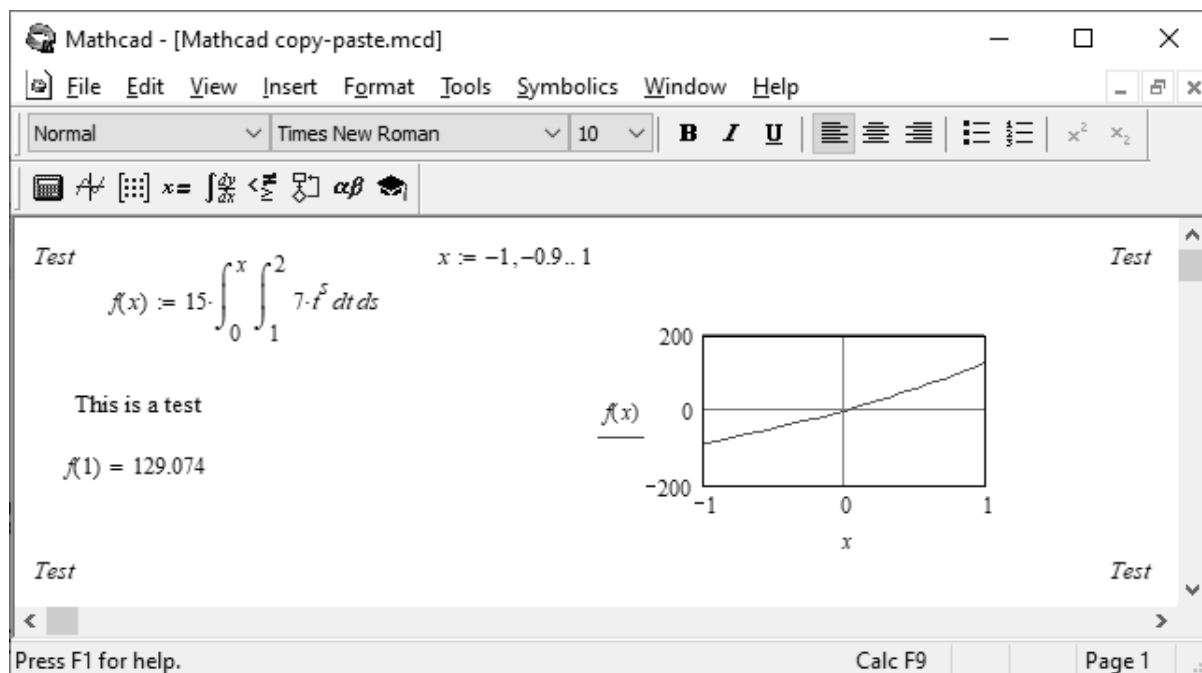

Fig 1.

Selected and copied a rectangle including four "Test" regions then pasted in MsWord with: Paste → Special → Bitmap.

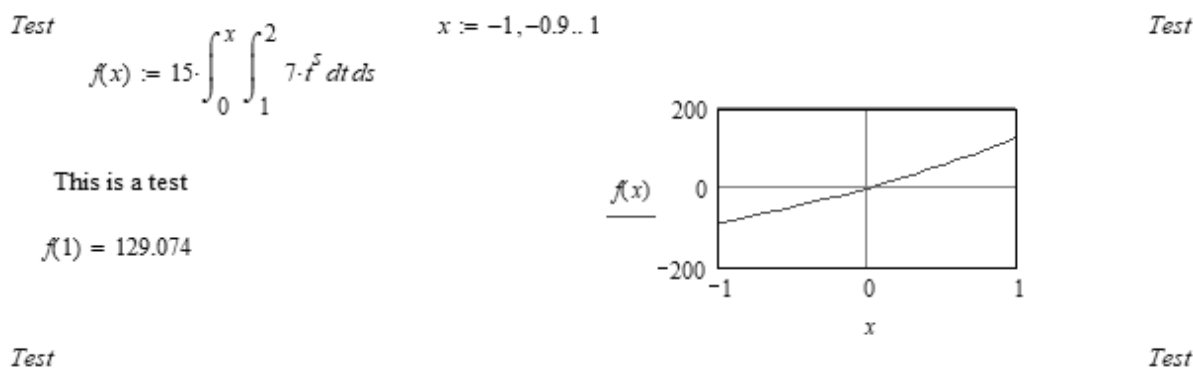

Fig 2.

The same, but pasted in MsWord with: Paste → Special → Picture (Windows Metafile).

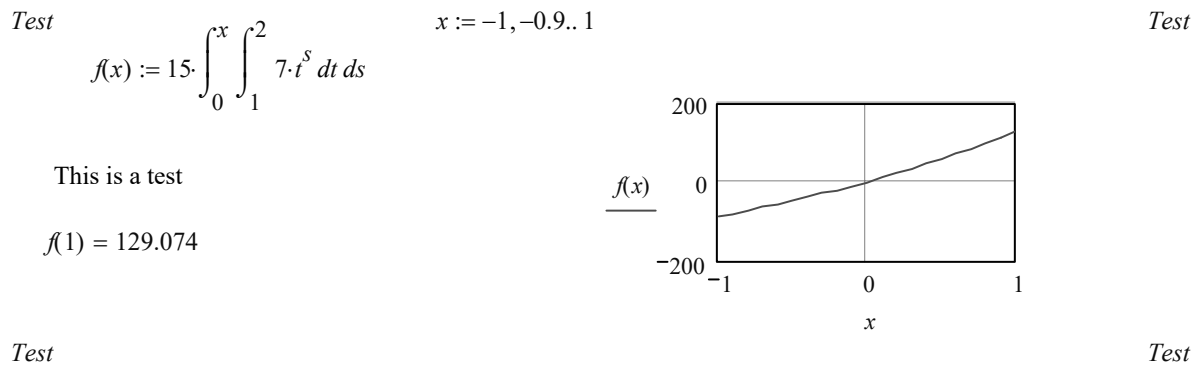

Fig 3.

Then printed in 'ProRes 1200' quality (1200 dpi) to the "HP Laserjet 2300 series PS" printer (which I don't have, but the output is directed to a file) to obtain a postscript (.ps) file.

The PostScript file was distilled to a pdf with Adobe Acrobat Distiller with Job settings for 'Press'. This produces 600 dpi output, and pictures are not reduced to lower resolution than 300 dpi.
