Interoperability Notes

- 1) The compatibility information listed for this Windchill maintenance release represents the current projections and is subject to change. It is provided here for planning purposes only.
- 2) Windchill 10.0 F000 will only support the M080 maintenance build of Creo Elements/Pro 5.0. If using a later maintenance build of Creo Elements/Pro 5.0 it will require as a minimum Windchill 10.0 M010.
- 3) There is a known memory leak issue when accessing the model structure reports from the embedded browser. To avoid this situation as an alternative a user can access these reports from the standalone browser. This issue is planned to be addressed in the next maintenance releases of Pro/ENGINEER and Creo. For more information please refer to Case Solution [31859](#).
- 4) When Creo 2.0 F000 becomes available it will be certified for interoperability starting with Windchill 10.0 M030.
- 5) Windchill Visualization support for Creo 2.0 and Windchill 10.0 will require the usage of the Creo View 2.0 Adapter.
- 6) Creo Elements/Pro 5.0 support for Windchill 10.1 forms based authentication will not be available until Creo Elements/Pro 5.0 M140 maintenance release.
