

SETUP PARTICIPANTS

An Alternative Approach

SWASEN INC

Integrating Business and Technology

NESTED TABS APPROACH

An alternative approach to OOTB Setup Participants

- Nested Tabs UI for required roles
- Can be deployed as an add on module

The screenshot displays the Windchill web application interface. At the top, the 'Windchill' logo is on the left, and 'Event Manage' is on the right. Below the logo is a navigation bar with tabs: Home, Program, Product (selected), Project, Change, and Library. Under the 'Product' tab, there are sub-tabs: Products, Details, Folders, Network, Packages, Team, Assignments, Change Monitor, Discussions, and Reports. The main content area shows the 'Product: Test Product' page. On the left, there is an 'Actions' dropdown menu with 'Select Team' selected. The 'Select Team' action details are as follows:

- Instructions:** Select the Design Engineer, Change Owner and Change Manager
- Process:** SSI Setup Participants_00001
- Process Initiator:** Organization Administrator
- Assignee:** Jon Castor
- Role:** Assignee
- Priority:** Highest
- Deadline:**
- Subject:** [Change Request - 00001-Test ECR - 001](#)

Below the action details, there is a section for selecting team members. It features three tabs: 'Change Owner', 'Change Manager', and 'Design Engineer'. The 'Change Owner' tab is currently active, showing a list of users: Library Administrator, Organization Administrator, Product Administrator, Project Administrator, Swamy Senthil, Venkata Kotha, and wcadmin. To the right of this list is a larger empty box for the 'Design Engineer' selection, with the names 'Dave Vandersleen' and 'Jon Castor' already entered. Navigation buttons '<<' and '>>' are located between the two lists.

SALIENT FEATURES

Sleek and creative UI

- Nested Tabs for different roles
- Users need to select the participants from a specific set which can be unique for different containers
- Product Manager can decide the allowable list of participants for each participant role
- Selectable participants are resolved from the container team roles/groups/individual users
- Role tabs can be configured as editable or view only
- Configuration details are defined in a XML file

SALIENT FEATURES

Built In Validation

- Number of participants selected for each role can be enforced

Live on R9.1 Production

- Effortless adoption
- In receipt of glorious feedback
