

Google Home

Patrick Maley

What is google home?

Google Home is a voice activated speaker that is powered by the Google Assistant. A simple voice request triggers Google Home to play music, podcasts, radio, youtube music, pandora and tuned in. Google Home can also answer questions, all you have to do is ask. Google Home can also set alarms and timers. One of the coolest features in my opinion, is that you can tell it where you left something, and when you need it again you can ask where you left that item, then it will tell you where you left it. With given access Google Home can be connected to other smart objects in the house such as thermostats and the TV.

Appearance

Google Home comes in 7 different base colors to match any decor in your house and in its environment.

Components

Not Shown in Image

- Touch Controls
- Far-Field Voice Recognition
- Multiroom Compatibility

Wireless
Bluetooth
Speakers

Fun Facts

There are some pretty funny things about the Google Home that was also done with the smart connected speaker Alexa. A TV show was playing and a commercial came on about a barbie doll house. Alexa heard the command from the TV telling her to purchase the 170\$ dollhouse. Anybody in San Diego at the time that has an Alexa and had their TV volume unintentionally ended up with that same dollhouse.
