

## Smart Socks...saving lives

The smart sock idea became a solution for parents worried about their babies sleeping safely at night. Besides IoT being able to transform businesses, it can also be used to save lives.

The Bluetooth capability will be able to monitor your child's pulse, hear rate and oxygen level without interrupting their precious sleep. This same technology is used by doctors today and we finally have the ability to take it home.

In addition to a base station there is a downloadable app that will allow you to view your baby's levels and alert you if there is a sudden change that you need to be aware of.

The constant monitoring throughout the night will analyze your baby's healthy patterns and ensure they are resting safely.
