

SAMSUNG FAMILY HUB REFRIGERATOR

Samsung's Family Hub is a Wi-fi Enabled refrigerator which has a touchscreen to communicate and lets user manage their groceries, connect with family and can be used as an entertainment system.

MY THOUGHTS:

The traditional fridge has less flexibilities where this smart fridge solves food management smartly. Every time the fridge door is shut, the 3 cameras takes photo inside of the fridge which also seamlessly connects with the phone. The touchscreen in the door has variety of use which also can sync the family members calendar with the family hub. As an entertainment system, it is also handy where people can listen song. The most interesting part of the fridge is; it can order your groceries for you.
