

SMART WATER DISPENSER

IoT Enabled

Refillable water tank

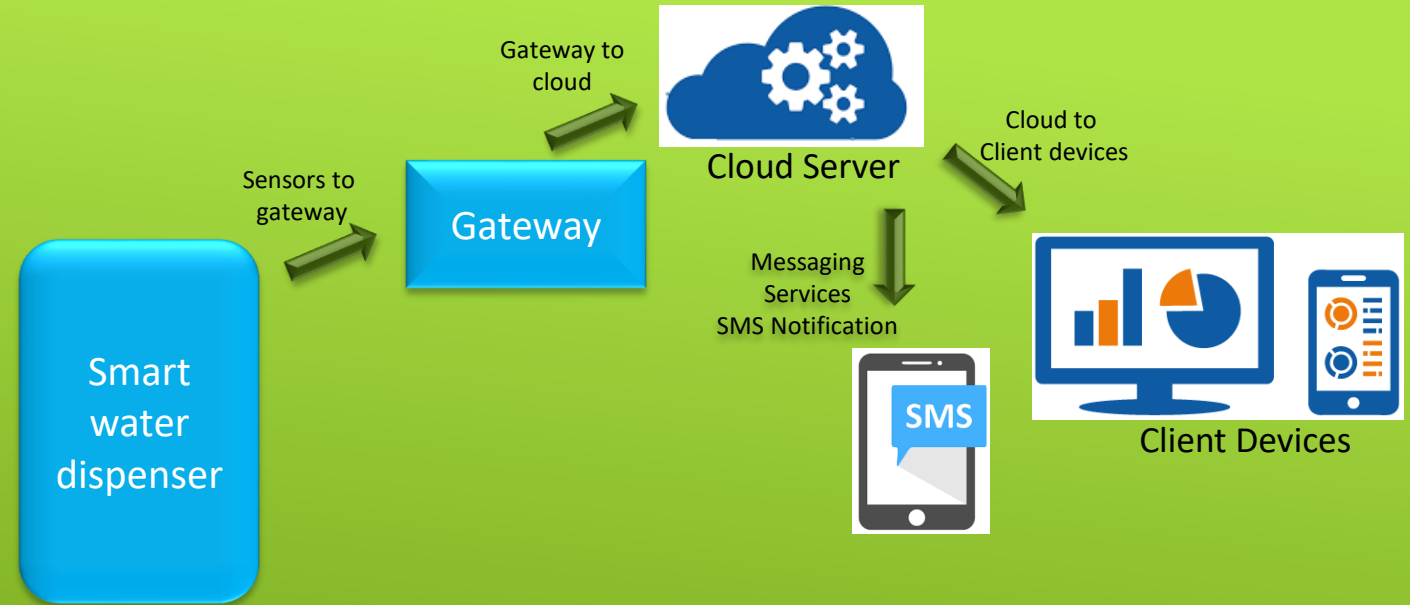

Cup dispenser

Glass dispenser

Tap – normal temperature

Tap – hot water

Drain / spill over water holder

Product Description

The smart water dispenser will detect the level of water in the refillable water tank and send refill request to the vendor.

The smart water dispenser can also analyse the following:

1. Check the number of cups in the cup dispenser and send message to the vendor / house keeping to fill more cups
2. The chemical composition of the water in the water tank
3. The temperature of water dispensed by the dispenser. This will help to in-turn set the water temperature remotely
4. The level of water collected in the spill over water holder
