

SPR Details - 8112434

PTC recommends using this tool to help diagnose issues being encountered while running PTC software or as a part in determining what value there is in updating to a particular Release or MOR.

Please note that SPR descriptions frequently do not detail enough information to determine a match with your software behavior. Simply stated, different SPRs can have similar symptoms. Conversely, an SPR can exhibit multiple symptoms that may or may not be captured in the description.

SPR information is offered for your limited review and within context. PTC Technical Support recommends weighing the above factors when reviewing the SPR information. In all cases where it applies, refer to the TAN associated with the SPR and contact Technical Support if you need further information.
